

PRESS RELEASE

Linke consolidates its SAP practice and becomes a Gold Partner of the company

Barcelona, September 29th, 2020. In just nine months, Linke has become SAP Gold Partner, the highest category of the company's Partner Edge program, which confirms the high level of service that its consultants provide in the implementations carried out within its SAP practice.

The specialist in cloud consulting services joined SAP Partner Edge at the beginning of the year as Silver Partner, after obtaining three certifications that endorse Linke's capabilities as a provider of SAP Managed Services and SAP HANA in the cloud, as well as their knowledge and resources to apply DevOps methodology to develop and operate cloud solutions. Now, after demonstrating their good practices and skills in the successful implementation of software vendor solutions in a wide variety of industries, their efforts have been recognized by awarding them with the Gold status.

This evolution will allow them to enjoy a series of advantages such as, for example, the option to participate in Ramp-Up programs for early adoption of technology, or access to strategy sessions, which will translate into benefits for their customers.

Since Linke's founding ten years ago, the company has been clear that its strength in the market is based on its high specialization in the cloud, an area in which it is Premier Partner of Amazon Web Services (AWS) and SAP. "Our capabilities in both environments, AWS and SAP, help users of SAP solutions optimize and benefit from the advantages of the cloud model in a simple way", explained Sandra Zavalgo, head of Marketing and Alliances of the company.

As the directive explains, being a Gold Partner reinforces Linke's position in the market, “and specifically in the level of service achieved in SAP practices. “This is supported by successful cloud implementations of solutions such as SAP S/4 HANA, SAP on HANA, SAP BW on HANA, SAP Portal, SAP Lumira, SAP GRC, SAP BusinessObjects or SAP NetWeaver Process Integration (PI) and, for, of course, the migrations of SAP systems to AWS cloud ”.

In addition, Linke designs, develops, implements and commercializes its own solutions. This allows companies that want to take their SAP environments to the public cloud to accelerate their migrations, and achieve better results in terms of optimization of resources, performance improvements and reduction of operating and management costs of the systems. These include Emory Cloud Backup, which allows customers to speed up and optimize the backup of SAP HANA databases on AWS and SAP ASE databases. Also Linke Connector for AWS, which was already available on the AWS application marketplace and now is in the SAP App Centre. This solution enables the integration of SAP software with AWS services to facilitate the extraction, analysis and modification of data from systems on the cloud platform on a large scale.

About Linke

Founded in 2010 by a group of technical professionals, Linke is an expert company migrating SAP environments to the Amazon Web Services (AWS) platform, specializations in which it helps its clients, mainly in Spain, Europe and the Middle East, to achieve the advantages of cloud computing in a real, effective and simple way.

The company has carried out 57 migrations from SAP systems to AWS and currently manages more than 350 SAP instances on the Amazon Web Services public cloud platform. Its specialization in both markets is evidenced by the fact that the company has 72 SAP and AWS certifications.

The company has opened a business unit specialized in artificial intelligence and the development of conversational interfaces for companies that want to take advantage of this technology to add differential value to their relationships with customers, employees, suppliers and partners.
